Add-on: Internal Molle-system for the tail door halfdrop window

The Molle panel is mounted completely on the half-drop window, leaving the locks accessible. In this way, the space on the window is used optimally for attaching bags or pouches with the well-known PALS webbing system, while the window can be opened or closed without hindrance.

No irreparable holes are made in the tail door, so that the tail door can always be returned to its original state.

The internal Molle panel is made of 3 mm thick aluminum, finished with the same industrial powder coating as the window, and equipped with the PALS webbing pattern. Holes of \varnothing 4.2 mm have been designed between this pattern, so that other systems, such as Quick Fist, can also be used.

A multi-functional system that also serves as burglary protection due to its smart way of mounting.

Installation

Mounting screws (stainless steel), cover caps and washers are included.

You need a mounting set, which consists of:

- drill 4.2
- drill 5.0
- tap M5
- Torx bit (tamper-resistant)

The mounting set is offered as standard with your quotation request.
